## Summary

General release of System Director 5.3-158

## Description of Field Notice

This release of Meru System Director (release 5.3-158) provides fixes that address the critical bugs related to controller and AP issues that were not included in the previous release. There were no new feature enhancements implemented.

Major changes to the v5.3-158 release were associated with:

1. Client association reliability with three stream clients
2. Client disconnections caused by frequent handoffs triggered by controller
3. Several security authentication corner cases
4. Fixed memory leak and packet drops on the AP320
5. Fixed several controller based problems related to QoS rules, VLAN assignments, and RADIUS

Please refer to the SD-5.3-158 release notes for installation, troubleshooting, and change details
