Summary

Fix patches are available for IDM 14.2 and 13.10 for the POODLE vulnerability. System Director fix will be available in next Maintenance Release (MR)

Description of Field Notice

A vulnerability has been reported in the SSLv3.0 protocol and all implementations of SSLv3.0 are affected. This vulnerability allows a potential attacker to decrypt ciphertext using a padding oracle side-channel attack. For more information about this vulnerability reference: POODLE: SSLv3.0 vulnerability (CVE-2014-3566).

Meru Networks' System Director, Network Manager and Meru Connect (Identity Manager) products all utilize SSLv3.0, so there is potential security vulnerability. We are examining all of our options for remediation with the

highest priority and will advise as soon as possible. Please note that a patch for SSLv3.0 has not yet been made available in the open source community.

Affected Products

Identity Manager (IDM) versions 14.2 & 13.10

Prior versions of these products used an earlier version of OpenSSL that is not vulnerable. Meru's EzRF Network Management and IDM Guest Access/Device Provisioning applications are not affected.

Solution

Identity Manager (IDM) versions 14.2 and 13.10 have patches available for download from the Meru Customer Support portal.

Meru Networks will be providing a fix in System Director Release 6.1-3. We recommend all customers affected by this vulnerability to upgrade to this version as soon as it becomes available. Please contact Meru Customer Support for details.

Software can be obtained on Meru's support site: http://support.merunetworks.com
